

baremedical®

Hydrogel Wound Gel

Baremedical hydrogel is a primary dressing for wounds with a light or no exudate to add or maintain moisture at the wound bed. This helps with maintaining a moist wound healing environment to assist in autolytic debridement. Cover with an appropriate secondary dressing depending on the amount of exudate and frequency of dressing change.

Features & Benefits

- Contains 1.5% glycerin and 94.66% water
- Provides moist wound healing environment
- Multiple single patient use
- Amorphous
- Non-Cytotoxic

PRODUCT INFORMATION

Sterility	Non-Sterile
Shelf Life	2 years
