

baremedical[®]

Film Dressing

Baremedical transparent film dressings help to maintain a moist wound surface, assisting in autolytic debridement in wounds with necrotic tissue. These dressings help with moisture management as they provide a moist environment and they are semi-permeable and water-resistant.

Features & Benefits

- May be used as a primary or secondary dressing
- Helps to maintain a moist wound surface, assisting in autolytic debridement in wounds with necrotic tissue
- Thin and water-resistant
- Bacteria or other contaminants cannot penetrate the dressing
- They are moisture vapor permeable which aids in moisture management
- Allows site to be visually monitored
- Provides a moist environment for granulating or superficial wounds
- Light exudate
- Patient information sticker on outer edge
