

baremedical[®]

Spacers and Masks

Baremedical spacers are used for effective delivery of medication suitable for all ages. The compact 220ml separable chamber is made from durable polypropylene plastic, which is entirely recyclable. This is also anti-static to ensure minimum medication adheres to the chamber, unlike alternatives. The masks are made of silicone and is structured to provide a good quality seal, yet not collapse easily, or to be too rigid. The anatomical shape of the mask helps create this optimal seal which is required to ensure maximum medication delivery.

Features & Benefits

- Anti-static plastic with embedded particles that can't be scratched or washed off
- Single patient re-usable
- Both masks are silicone contoured
- Easy cleaning
- Universal inhaler fitting
- 15mm - 22mm round mouthpiece
- Spacers are 100% recyclable
- Inhaler can be conveniently stored inside the spacer
- Endorsed by Asthma Australia
- Small mask is suitable for ages 0-6
