

baremedical[®] Lubricating Gel

Baremedical lubricating gel is a clear, water-soluble and grease-less lubricant used by healthcare professionals. It's formulated to spread evenly and is ideal for lubricating rubber materials and synthetic surfaces, as well as surgical instruments. Lubricating gel is used during many routine medical procedures such as catheter insertions and specular insertions. 3 Gram foil packs, making them convenient for single patient use. These are sterile until opened.

Features & Benefits

- Non-staining and water-soluble for quick, easy clean-up
- Stable, non-greasy formula to help enhance patient comfort
- Improved viscosity for easier application
- Not made with natural rubber latex or fragrance
